Re: Field Change - Trickling Filter Remediation
Project, Winston Thomas Wastewater
Treatment Plant, Bloomington, IN

Date: 05/21/98
cc: Todd Scoville
Lyle Grant

The purpose of this memo is to document a Field Change pursuant to the approved Remediation Work Plan dated May 5, 1998.

Field Change No. 2 - Waste Stockpile Area

Under this field change, the temporary waste storage area to be located north of the trickling filter will be deleted. Waste will be accumulated within the processing area located adjacent to the trickling filter. This change is made possible by the low amount of debris and waste which was observed in the initial test pits. This area will be left open for future construction of a waste stockpile area, if necessary.

We trust this satisfies your needs. Please contact us with any questions.
